## Chemical cleaning – Power Plants

Chemical cleaning is the most efficient and economical way to clean process equipment and systems and achieve good performance. AEKS is the leading provider of precision cleaning services for steam generators(HRSG, WHB,coal fired..), boilers and process equipment in energy sector. AEKS carries out both Pre-operational and Maintenance Chemical cleanings. Pre-operational chemical cleanings guarantee that plants will operate smoothly and correctly during startup and operation. This procedure is used to clean systems of any material residue after construction activity. Maintenance Chemical Cleanings seeks to return the system to its intended/initial working state, improving heat exchange rates, removing the fouling/deposits, reducing corrosion and extending plants' life. AEKS provides both Water Side and Fume Side chemical cleanings of boilers. Our skilled and dedicated employees provide customized solutions, faster turnaround and lower overall cost.

### ACTIVITIES

- Boiler cleaning
- Heat exchanger cleaning
- Pipeline cleaning
- Process equipment cleaning
- Passivation

### EQUIPMENT

- Chemical resistant pumps
- Wastewater storage tanks
- Circulation system
- Purified water system
