

PHARMACEUTICAL

High purity cleaning

AEKS has over 30 years of experience and is aware of the serious threat that corrosion, bioburden, rouge, and other surface pollutants pose to the production and quality control of pharmaceuticals. We created specialized chemical circulation pump-skids and specialized chemical cleaning techniques all in compliance standards by biopharmaceutical manufacturers. Surface pollutants from metal fabrication, installation, and production are removed by our pre-operational cleaning operations. To guarantee clean, passivated, and sanitized contact surfaces and product purity, our maintenance cleaning procedures eliminate rouge, product/by-product residue, and biocontamination. AEKS can fulfill your exact cleaning needs and offer final quality documentation with each job we complete, whether we process parts at our site or send our professional technical staff to your plant.

ACTIVITIES

- pre-operational passivation
- derouging & passivation
- media blasting
- sanitization
- biofilm removal
- final quality report

EQUIPMENT

- process equipment & distribution systems
- cip skids
- purified water systems
- clean/pure steam generators & systems
